

Acquire Lock(s)

Dynamic Variables

Name	Default Value
start_time	
presenter	

Note: Variables added in this section can be used in Record Filters and in other applicable fields in the form %VARIABLENAME%. Spaces in variable names are not allowed. Any variable added to this form becomes available in the "Data Mappings" section below. Default value is used if a data mapping is not defined. Variable names can contain letters (A-Z,a-z), digits (0-9), underscore (_), dash (-) and dot (.)

Data Mappings

Parameter	Source
Variable: start_time	POST Variable Name: %globals_post_start_time%
Variable: presenter	POST Variable Name: %globals_post_presenter%

Note: Use this section to setup dynamic assignment of values to variables.

Filter Options

Filter Status

On

Logical Grouping

Match on at least ONE condition

Filter Mode

Return the records matching the given conditions

Record Filters

Conditions	Record Set Field Name	Value to Match	Match Type	Match Case	Allow Empty
	ds_start_time	%start_time%	String match - Contains	No	No
	ds_presenter	%presenter%	String match - Contains	No	No

Note: Dynamic variables added in "Dynamic Inputs" screen can be used here in the "Value to Match" field in the form %VARIABLENAME%.

Asset listing Parameters

Dynamic Parameters

Parameter	Source
Array of specific asset IDs or selection group (specified assets must be children of the static related node)	POST Variable Name: start_time ☐ Delete?
	POST Variable Name: presenter ☐ Delete?
--- New Mapping ---	GET Variable Name

If dynamic root not found

Use static root node
