Forensic and Applied Victimology

**EXPRESSIONS OF INTEREST**

This three day course will provide a holistic theoretical and practical understanding of the role of victimology in investigations. Participants will learn about a social science approach to understanding victimity through the lens of the scientific method.

When: 3 Days in May 2016
Where: Canberra
Time: 9.00am - 5.00pm
Other: Participants will be provided with the relevant case and other materials.

Lunch will be provided and light refreshments available during the day.

Cost: $750 ($600 each for students and groups of 3 or more from the same office)

1.00pm    Psychopathology
2.00pm    Victim Motivations
3.00pm    Case Study (Murder of an intimate partner)

Each day a capstone case study is presented to highlight some of the major aspects covered that day. Some individual sessions will also use a case study approach to apply theory to practice. This is a practical seminar that will give participants the tools they need to perform a competent victimology using social science theory and application in order to answer questions that will better inform investigations, the management of victims, and forensic outcomes.

If you would like to do this course please let us know via email using the details provided on the front page of this brochure. We will book a venue and make final arrangements once we have a met a minimum number to run the seminar. Should you require more information regarding the seminar, please call Wayne or Amber on the number provided.

We hope to see you in Canberra!
