

How to call a Video Conference unit directly (2 way call)

The following instructions will allow you to connect to another video conference unit directly. Once in a point-to-point call, other video conference units cannot join. To have more than 2 video conference units for a meeting, you need to create a multi-point conference call.

Please refer to the DIT website or contact the DIT Service Desk on 84357, if you require further assistance with multi-point calls.

1. To connect to another unit, you need to first find it in the directory, highlight directory and press enter on the remote.

2. You will see a list of Video Conference units, select the unit you want and press enter or call.

Should you experience any problems or require more training or information please call the DIT Service Desk on 84357.
