# The Australian Rice Breeding Program: where quality meets quantity

**Dr Ben Ovenden, Dr Peter Snell and Dr Jixun Luo**

Australian Rice Partnership II project

*Australian Rice Quality Symposium, Wednesday 19 July 2017*

*CSU Wagga Wagga*

# Aim: Create value and sustainability for rice growers

$$\textit{Total Return} = \textit{Amount} \times \textit{Price}$$

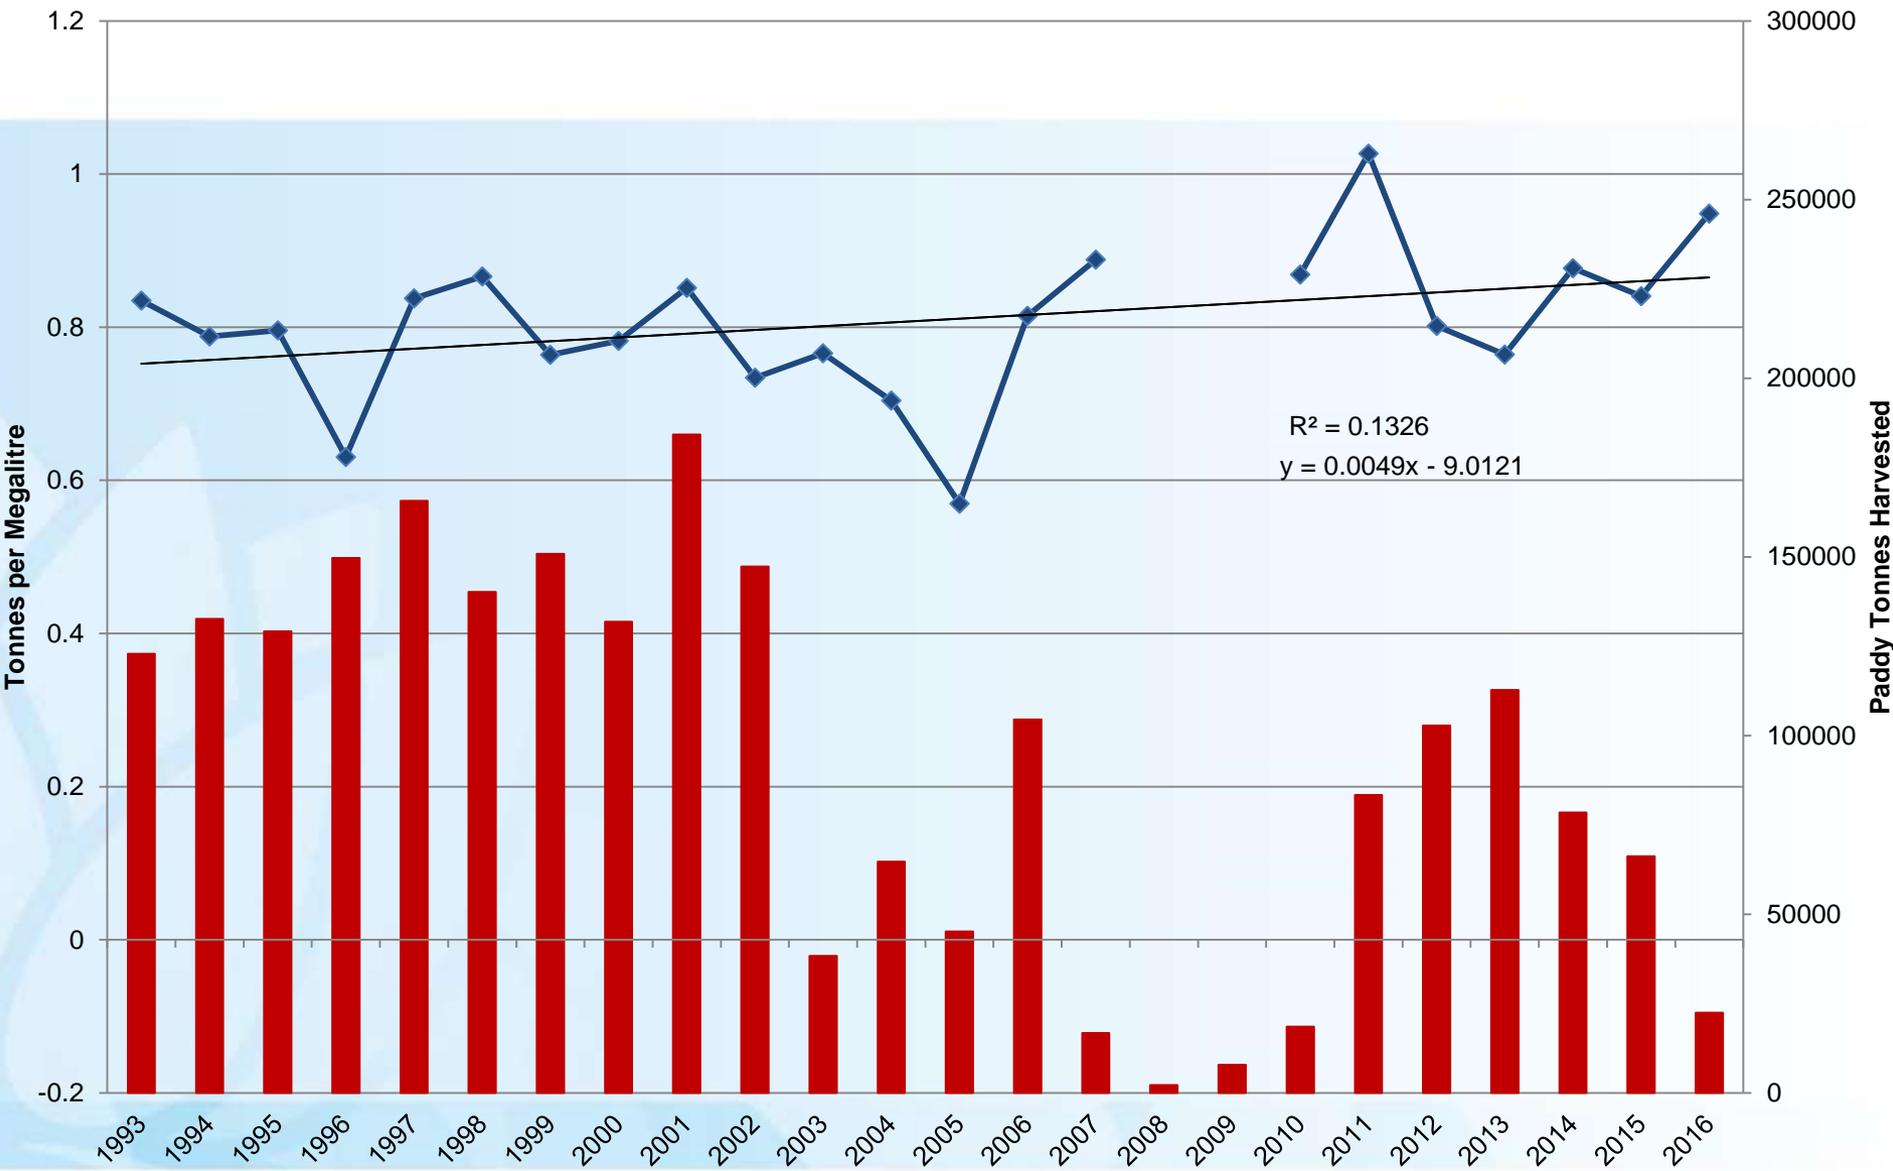

$$\textit{Amount} = \frac{\textit{Grain Yield}}{\textit{most limiting resource}}$$

 **Water, WUE**

$$\textit{Price} = \textit{category} \times \textit{grade in category}$$

**Quality**

# Estimated Weighted Average Tonnes per Megalitre for 1993 - 2016 Crop Years

# Water Use Efficiency

Target of 1.5t/ML for the whole rice industry:

- 0.5% per year (current rate) = 2099
- 1.0% (double current rate) = 2058
- 1.5% (triple current rate) = 2045
  
- 3.0% (6x current rate) = 2031

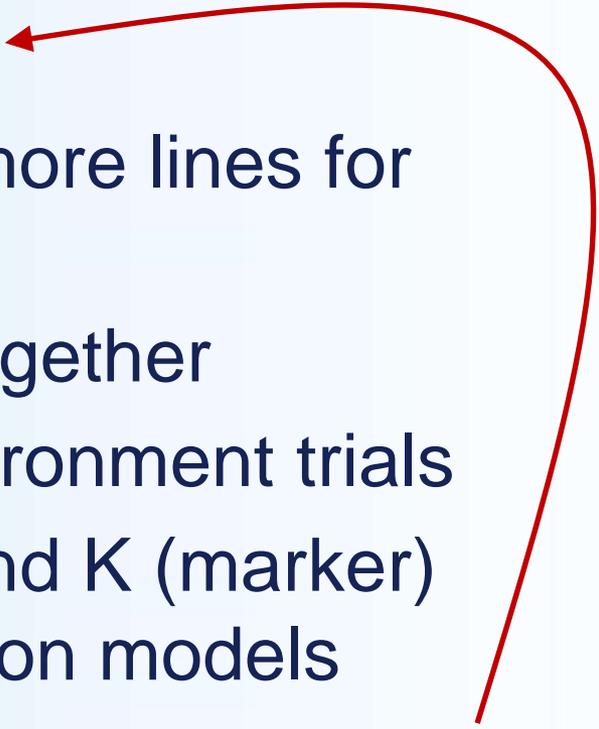

# Rice Breeding 2.0

- Focus on performance under reduced irrigation
- Focus on high value quality types
- Focus on increasing rate of genetic gain:

$$\Delta G = \frac{i h \sigma_A}{L}$$

$$\text{Response} = \frac{\textit{intensity} \times \textit{accuracy} \times \textit{genetic var}}{\textit{generation time}}$$

# Increasing *accuracy* and reducing *time*

- Markers “early and often”
  - Sparse phenotyping (test more lines for yield)
  - Analyse co-located trials together
  - Increased use of multi-environment trials
  - Incorporate A (pedigree) and K (marker) matrix into breeding selection models
  - K matrix = transition to genomic selection
- 

# Increase *accuracy* and reduce *time* in rice quality (rice *price*) selection

## 1. New quality categories

- Low GI medium grain

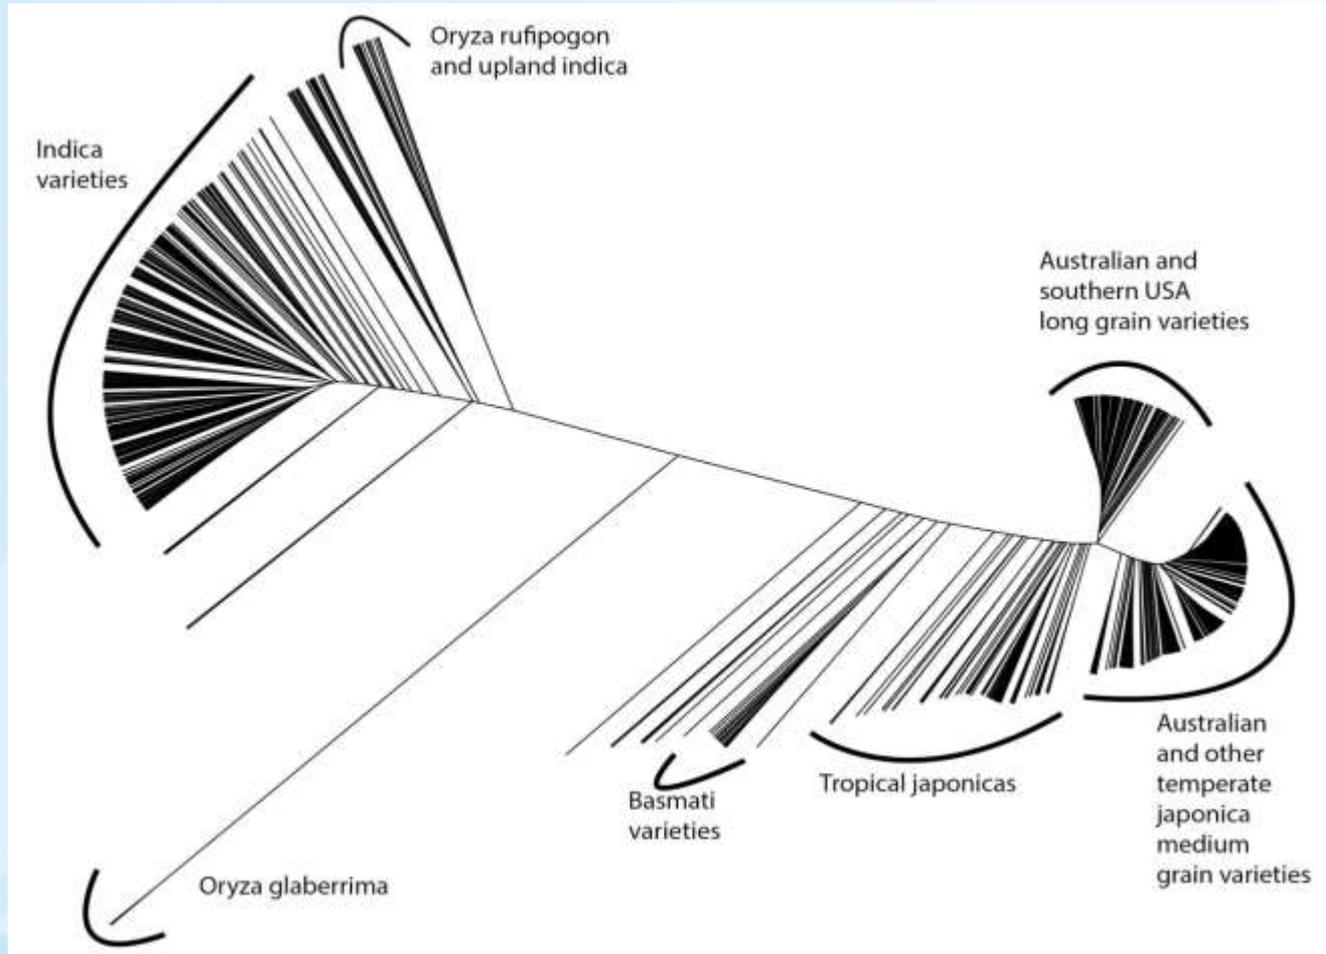

## 2. Better quality in existing categories

- Reduced cracking, chalk
- Optimal cooked rice texture, aroma

## 3. MAS enrichment of quality alleles

- So that breeding program germplasm screened for cold, aerobic performance already has essential combo of quality traits

# Yanco Germplasm Collection

# Mapping populations

- Yanco Core Set
  - 250 diverse japonica lines
  - Association Mapping / GWAS
  - 30,000 SNPs
- Baru x M205
- Teqing x Lemont
- Basmati 370 x Doongara
- Purple x Sherpa
- Reiziq x Kyeema
- Sherpa x Doongara
- ...
